RECEIVED

MAY 20 2013

Dear Ms. Monroe:

The purpose of this submittal is to update the initial notification originally submitted on August 30, 2010 required of designated sources under 40 CFR 63 Subpart ZZZZ.

The designated source is operated by MeadWestvaco of Virginia (Registration No. 20328). The facility is located at the following address:

MeadWestvaco of Virginia, Inc  
Packaging Resources Group  
104 East Riverside Street  
Covington, VA 24426

This facility is considered a major source under the definitions provided in 40 CFR 63.2. Detailed information required by 40 CFR 63.9(b)(2)(iv) is attached.

If you have any questions concerning this submittal please contact me at (540) 969-5385.

Very Truly,

A handwritten signature in dark ink, appearing to be 'J. Taylor'.

James C. Taylor  
Regional Manager, Environmental  
Shared Business Support

## ATTACHMENT I

This attachment contains the information required in 40 CFR 63.9 (b)(2)(iv). Information related to the nature, size, design, and method of operation is provided. It should be noted that the facility operates additional compression engines that are only used for emergency purposes and do not have a rating greater than 500 HP. As such no notification requirements apply to those units.

The following RICE was identified in the original notification, but is longer located at this site.

| Emission Systems       | Process Type  | Capacity | Pollutants              |
|------------------------|---|----------|-------------------------|
| Power House Compressor | Diesel engine used to power an air compressor for supplying air mill systems, when electric compressors are not available | 600 Hp   | Combustion related HAPs |

The following were originally considered to be emergency engines. However, upon further review of operations of these engines it is possible that circumstances could require use of these engines that do not meet a strict reading of the emergency definition provided in the standard. As such the notification is being updated.

| Emission Systems   | Process Type  | Capacity                      | Pollutants              |
|--|---|-------------------------------|-------------------------|
| East Side Pump Station 1<br>East Side Pump Station 2<br>No. 9 Pump Station<br>Paper Mill Pump Station 1<br>Paper Mill Pump Station 2 | Diesel engine used to pump water from individual lift stations in the event that the normal use electric pumps are not available or are need to supplement pumping. | 118<br>120<br>140<br>75<br>75 | Combustion related HAPs |
